## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 5, 7-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Wu (US 6,648,682).

Wu discloses a connector being mounted on a printed circuit board, comprising:

an insulative housing having a pair of side walls (26);

an L-shaped tongue (12);

a plurality of compliant contacts (14) with press-fit tail (141), securing portion (142);

a peg (50);

The recitation of Serial Advance Technology Attachment (SATA) has not been given patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478 (CCPA 1951).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 6, 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wu (US 6,648,682) in view of Zhang (US 6,746,281).

Regarding claim 4, Wu substantially disclosed the claimed invention except for the press-fit tails comprises a needle eye.

Zhang teach a contact (21) having a needle eye end (202).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a needle eye into Wu's contact, as taught by Zhang for ease of insertion.

Regarding claim 6, Wu substantially disclosed the claimed invention except for a pair of pegs.

Zhang teach a pair of pegs (18).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a pair of pegs into Wu's connector, as taught by Zhang for stable connection.

Regarding claims 9-12, Wu discloses a connector being mounted on a printed circuit board, comprising:

an insulative housing having a pair of side walls (26);

Art Unit: 2833

an L-shaped tongue (12);

a plurality of compliant contacts (14) with press-fit tail (141), securing portion (142);

a peg (50);

a stand-off formed a wider U-shaped (171);

a undercut (30).

Regarding claim 6, Wu substantially disclosed the claimed invention except for a pair of peps.

Zhang teach a pair of peps (18).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a pair of peps into Wu's connector, as taught by Zhang for stable connection.
